Experience

poiro.com **Jul 2026 – Present**
Fullstack Developer Intern *Python, FastAPI, MongoDB, Redis, Celery, Cloudflare R2*

- **Graph Query Rewrite:** Replaced one subtree query per nesting level with a single MongoDB **$graphLookup** for the folder tree, and cut folder-edit database round-trips from **3 to 1**.
- **Shared Asset Data Model:** Designed the org-scoped MongoDB models and FastAPI backend for one asset service shared by **3 apps**, and migrated existing assets from each app into it.
- **Fail-Closed Provider Layer:** Integrated Pixabay, Unsplash and Pinterest behind one adapter contract with org-scoped Redis caching, capping paid calls at **500 per org per day** and **5,000 globally**, counted only on cache misses.

klimb.io **Nov 2025 – May 2026**
Full Stack Developer Intern *TypeScript, Express.js, PostgreSQL, Redis, AWS*

- **Usage Ledger in PostgreSQL:** Architected a credit ledger enforced in middleware that records every use of **6+ AI features** per customer, replacing on/off feature flags and making usage-based billing possible.

Projects

Chatterly | GitHub | *Node.js, Apache Kafka, Redis, PostgreSQL, Socket.io*

- **Streaming Ingestion:** Built real-time chat where **Kafka** decouples message ingestion from delivery and persistence; workers batch writes to PostgreSQL while Redis pub/sub fans events across server instances, with offset handling for delivery guarantees.

Storix | GitHub | Live | *FastAPI, Celery, Redis, PostgreSQL, AWS S3*

- **Async Ingestion Pipeline:** Developed a PDF ingestion pipeline where FastAPI accepts the upload, **Celery** workers extract off the request path, and Redis pub/sub streams each stage's status to the client.

DeepDoc | GitHub | *TypeScript, Azure OpenAI, Pinecone, PostgreSQL*

- **Stage-Level Debugging:** Created a **36-case** evaluation harness that separates indexing, retrieval and generation failures; it traced empty answers to a field the ingestion step never wrote, after prompt changes had failed.

CodeSM | GitHub | Live | *Node.js, BullMQ, Redis, PostgreSQL, Docker*

- **Queue-Backed Execution:** Implemented sandboxed grading for **6 languages** on BullMQ workers, with Docker limits of **256 MB**, **32 PIDs** and **0.5 CPU** per run.

Skills

Languages: Python, SQL, TypeScript, C++
Data Systems: PostgreSQL, MongoDB, Redis, Apache Kafka, Pinecone, data modelling
Backend & Pipelines: FastAPI, Node.js, Express.js, REST APIs, Celery, BullMQ, WebSockets
Infrastructure: AWS (EC2, S3), Docker, Kubernetes, Linux, Git, CI pipelines

Education

Indian Institute of Information Technology Nagpur **Nov 2022 – May 2026**
B.Tech in Computer Science and Engineering *Nagpur, Maharashtra*

Achievements

- **Competitive Programming: Top 5% globally** on LeetCode (**1800+ rating**, 800+ problems solved) · **3-star** on CodeChef (1700+) · Pupil on Codeforces.
- **Hackathon: 3rd place** at Tantrafiesta 2024, IIIT Nagpur.
