Shivam Kumar Verma

+91 91356 68614 | shivam.verma.dev00@gmail.com | LinkedIn | GitHub | Portfolio

Education

Indian Institute of Information Technology, Nagpur **November 2022 – May 2026**
B.Tech in Computer Science and Engineering *Nagpur, Maharashtra*

Experience

poiro.com **July 2026 – Present**
Fullstack Developer *Python, FastAPI, PostgreSQL, Cloudflare R2, TypeScript*

- **Storage Integrity and Deduplication:** Engineered storage-verified **SHA-256** deduplication in **Python/FastAPI** with a **PostgreSQL** uniqueness guarantee and client-side preflight, preventing duplicate R2 writes under concurrent uploads without trusting client-supplied hashes.
- **Asset Data Model and APIs:** Built the data model, services, and APIs for the asset layer behind AI-generation surfaces; fixed reference-integrity defects that hid nested folders and AI-lineage assets, and replaced depth-dependent tree traversal with a **single aggregation query**.
- **Production Reliability:** Cleared approximately **1,041 Ruff findings across 7 Python trees**, made lint/format checks blocking in CI and pre-push, and added dynamic package discovery so new packages are covered automatically.

klimb.io **November 2025 – March 2026**
Full Stack Developer Intern *Node.js, PostgreSQL, Redis, AWS (S3, EC2)*

- **Query Performance:** Rewrote slow **PostgreSQL** queries and restructured recruiter-dashboard data access, reducing p95 latency and memory overhead under concurrent load.
- **Usage Metering:** Designed a PostgreSQL-backed usage-metering and credit ledger across **6+ AI features**, giving product and finance an auditable per-feature consumption record.
- **Session Isolation:** Developed backend services for a **3+ stage** AI interview platform with automated proctoring and strict candidate-level data isolation across concurrent live sessions.

Projects

Yuvro | GitHub | Demo | *Python, FastAPI, PostgreSQL, Kubernetes, AWS S3*

- **Content-Addressed Storage:** Implemented **SHA-256 content-addressed S3 storage** with template manifests and garbage collection, so repeated files are stored once and cleanup is deterministic.
- **Indexed Metadata at Scale:** Modeled the file tree as a self-referential PostgreSQL table indexed on (project, parent), (project, parent, name) and (project, type), keeping lookups fast without storing file contents in the database.

Hireflow | GitHub | *Node.js, TypeScript, BullMQ, Redis, PostgreSQL, Playwright*

- **Multi-Source Ingestion:** Created an ingestion pipeline over **4 sources** (LinkedIn, Wellfound, YC, Telegram via GramJS) with **SHA-256 fingerprints** of normalised title, company and description to drop cross-source duplicates.
- **Isolated Pipeline Stages:** Separated crawling, LLM enrichment and **Playwright** automation onto independent **BullMQ + Redis** queues, so a bot-detection block in one stage never stalls the others and third-party rate limits hold.

CodeSM | GitHub | Live | *Node.js, BullMQ, Redis, PostgreSQL, Docker*

- **Sandboxed Execution Engine:** Architected a BullMQ + Redis pipeline that grades untrusted code in **6 languages** inside **Docker** with CPU, memory, process, network and timeout limits, reusing persistent containers and fetching S3 test data one case at a time to bound per-job memory.

Technical Skills

Backend & APIs: Python, FastAPI, Node.js, Express.js, REST APIs, WebSockets, data pipelines, distributed job processing
Data Systems: PostgreSQL, Redis, MongoDB, Prisma, Cloudflare R2, AWS S3, content-addressed storage, deduplication pipelines
Infrastructure & Runtimes: Docker, Kubernetes, BullMQ, Celery, Linux, Nginx, AWS (EC2, S3), CI/CD
Languages & Automation: Python, TypeScript, JavaScript, C++, Playwright, Ruff, ESLint

Achievements

- **Competitive Programming: Top 5% globally** on LeetCode (**1800+ rating**, 800+ problems solved) · **3-star** on CodeChef.
- **Tantrafiesta 2024: 3rd rank** at IIIT Nagpur's hackathon.
