Education

Indian Institute of Information Technology, Nagpur **November 2022 – May 2026**
B.Tech in Computer Science and Engineering *Nagpur, Maharashtra*

Experience

poiro.com **July 2026 – Present**
Fullstack Developer *TypeScript, Python, FastAPI, Next.js, PostgreSQL, Cloudflare R2*

- **Asset Data Model and APIs:** Built the data model, services, and APIs for the asset layer behind AI-generation surfaces; fixed production endpoint failures and reference-integrity defects that hid nested folders and AI-lineage assets, and replaced depth-dependent tree traversal with a **single aggregation query**.
- **Storage Integrity and Deduplication:** Engineered storage-verified **SHA-256** deduplication with a database uniqueness guarantee and client-side preflight, preventing duplicate R2 writes without trusting client-supplied hashes.
- **Codebase Reliability:** Cleared approximately **1,041 Ruff findings across 7 Python trees**, made lint/format checks blocking in CI and pre-push, and added dynamic package discovery so new packages are covered automatically.

klimb.io **November 2025 – March 2026**
Full Stack Developer Intern *TypeScript, React, Node.js, Express.js, PostgreSQL, Redis, AWS*

- **Usage Metering:** Designed a PostgreSQL-backed usage-metering and credit ledger across **6+ AI features**, giving product and finance an auditable per-feature consumption record.
- **Query Performance:** Rewrote slow queries and restructured recruiter-dashboard data access, reducing p95 latency and memory overhead under concurrent load.
- **AI Interview Platform:** Developed backend services for a **3+ stage** AI interview platform with automated proctoring and strict candidate-level data isolation across concurrent live sessions.

Projects

Hireflow | GitHub | *Node.js, TypeScript, Playwright, BullMQ, Redis, PostgreSQL*

- **Scraping and Browser Automation:** Created an ingestion pipeline that scrapes listings from **4 sources** (LinkedIn, Wellfound, YC, Telegram via GramJS) and applies through **Playwright**, with each stage on its own **BullMQ** queue so a bot-detection block in one never stalls the others and third-party rate limits hold.
- **Parsing and Dedup:** Implemented LLM parsing of stack and seniority with Gemini, plus **SHA-256 fingerprints** of normalised title, company and description to drop cross-source duplicates.

CodeSM | GitHub | Live | *Node.js, Express.js, BullMQ, Redis, Docker, AWS EC2*

- **Sandboxed Execution Engine:** Architected a BullMQ + Redis pipeline that grades untrusted code in **6 languages** (including JavaScript) inside **Docker** with CPU, memory, network and timeout limits, keeping the API responsive with retries for failed jobs.
- **Lazy Testcase Processing:** Fetched S3-backed test data one case at a time with early exit on the first failure, bounding per-job memory on **AWS EC2**.

Storix | GitHub | Live | *FastAPI, Celery, Redis, Next.js, WebSockets*

- **Live Async Pipeline:** Shipped a PDF ingestion flow where **Celery** workers extract off the request path and Redis pub/sub relays each stage to a **Next.js** client over WebSockets.

Technical Skills

Backend & APIs: Node.js, Express.js, FastAPI, Next.js, REST APIs, WebSockets, BullMQ, Celery
Data Systems: MongoDB, PostgreSQL, Redis, Prisma, Cloudflare R2, AWS S3
Infrastructure & Runtimes: Linux, AWS (EC2, S3), Docker, Kubernetes, Nginx, Git, CI/CD
Languages & Automation: JavaScript, TypeScript, Python, C++, Playwright, GramJS, Postman

Achievements

- **Competitive Programming: Top 5% globally** on LeetCode (**1800+ rating**, 800+ problems solved) · **3-star** on CodeChef.
- **Tantrafiesta 2024: 3rd rank** at IIIT Nagpur's hackathon.
