Experience

poiro.com **Jul 2026 – Present**
Fullstack Developer Intern *Python, FastAPI, MongoDB, Redis, Celery, Next.js, TypeScript, Cloudflare R2*

- **AI Workflow Orchestration:** Built the node and group system behind the AI workflow builder: each workflow is a DAG of generation steps with typed ports and a defined execution order, and groups bundle steps into nested sub-workflows that run as one unit.
- **Fail-Closed Spend Caps:** Integrated Pixabay, Unsplash, and Pinterest behind one adapter contract with per-org Redis caching, and capped provider calls fail-closed at **500 per org per day** and **5,000 per day globally** so no workflow can run up vendor costs.
- **Digital Asset Service:** Designed the org-scoped MongoDB models and FastAPI backend for one asset service shared by **3 apps**, migrated existing assets into it, and added upload-time duplicate blocking with pHash and dHash image similarity.

klimb.io **Nov 2025 – May 2026**
Full Stack Developer Intern *TypeScript, Express.js, PostgreSQL, Redis, AWS, OpenAI Realtime*

- **Production AI Interview Platform:** Engineered the backend for a **3-stage** AI interview platform used by **hundreds of candidates**, with automated proctoring and strict candidate-level data isolation; its live voice round on OpenAI Realtime asks questions from the candidate's resume and scores the transcript.
- **Auditable Usage Ledger:** Replaced on/off feature flags with a PostgreSQL credit ledger that records every use of **6+ AI features** as an auditable per-feature log, which made usage-based billing possible.

Projects

DeepDoc | GitHub | *RAG, TypeScript, Azure OpenAI, Pinecone, PostgreSQL*

- **LLM Evaluation Harness:** Created a **36-case** evaluation harness (**6 multi-turn**, including Hinglish and prompt-injection cases) that replays retrieval sweeps, A/B tests prompts, and separates indexing, retrieval, and generation failures; it caught a metadata bug that blanked every retrieved chunk.
- **RAG Pipeline:** Developed section-aware chunking, document-scoped vector retrieval, and follow-up query rewriting from chat history, then ranked, deduplicated, and packed context into a token budget, tuned across **100+ configurations**.

Hireflow | GitHub | *Node.js, BullMQ, PostgreSQL, Gemini, GPT-4o-mini, Playwright*

- **Guardrailed LLM Pipeline:** Shipped an AI job-application engine that parses listings with Gemini and rewrites resume bullets with GPT-4o-mini, then validates every rewritten skill against the real profile so the output cannot invent one; used for real applications.
- **Decoupled Queues:** Separated ingestion, AI processing, and Playwright automation onto BullMQ queues so a block in one stage never stalls the others.

CodeSM | GitHub | Live | *Node.js, BullMQ, Redis, PostgreSQL, Docker*

- **Sandboxed Execution:** Implemented a locked-down container runtime for **6 languages** with no network, a read-only filesystem, and CPU, memory, and time limits, graded asynchronously on BullMQ workers.

Skills

Languages: Python, TypeScript, SQL, C++
AI Engineering: LLMs, RAG, LLM evaluation, prompt injection testing, embeddings, vector databases (Pinecone), Azure OpenAI, OpenAI Realtime, Gemini
Backend: FastAPI, Node.js, Express.js, REST APIs, Celery, BullMQ, WebSockets
Data & Infrastructure: PostgreSQL, MongoDB, Redis, Pinecone, Docker, Kubernetes, AWS (EC2, S3)
Frontend & Tooling: React, Next.js, Git, Docker, CI/CD pipelines, Linux

Education

Indian Institute of Information Technology Nagpur **Nov 2022 – May 2026**
B.Tech in Computer Science and Engineering *Nagpur, Maharashtra*

Achievements

- **Competitive Programming: Top 5% globally** on LeetCode (**1800+ rating**, 800+ problems solved) · **3-star** on CodeChef (1700+) · Pupil on Codeforces.
- **Hackathon: 3rd place** at Tantrafiesta 2024, IIIT Nagpur.
