Experience

poiro.com **Jul 2026 – Present**
Fullstack Developer Intern *Python, FastAPI, MongoDB, Redis, Celery, Next.js, TypeScript, Cloudflare R2*

- **Cost Controls on Provider Calls:** Integrated Pixabay, Unsplash, and Pinterest behind one adapter contract with per-org Redis caching, and capped provider calls fail-closed at **500 per org per day** and **5,000 per day** globally, so no workflow can run up vendor costs.
- **Shared Media Asset Service:** Designed the org-scoped MongoDB models and FastAPI backend for one asset service used by **3 apps**, with direct uploads to Cloudflare R2, keyset pagination, and upload-time duplicate blocking with pHash and dHash image similarity.
- **AI Workflow Engine:** Implemented the node and group system behind the AI workflow builder: each workflow is a DAG of generation steps with typed ports and a defined execution order, and nested groups run as sub-workflows.

klimb.io **Nov 2025 – May 2026**
Full Stack Developer Intern *TypeScript, Express.js, PostgreSQL, Redis, AWS*

- **Usage-Based Credits Ledger:** Built a PostgreSQL credit ledger that meters usage across **6+ AI features** as an auditable per-feature log, replacing on/off feature flags so customers are billed by what they actually use.
- **AI Interview Platform:** Engineered the backend for a **3-stage** AI interview platform used by **hundreds of candidates**, with automated proctoring and strict candidate-level data isolation.

Projects

CodeSM | GitHub | Live | *TypeScript, Node.js, BullMQ, Redis, PostgreSQL, Docker*

- **Queue-Backed Execution:** Architected a code execution engine where the API stores a pending submission and BullMQ workers run untrusted code for **6 languages** off the request path, in Docker with no network, a read-only filesystem, and CPU, memory, and time limits.
- **Cheap per-Job Work:** Reused one container per submission across its test cases and streamed test cases from S3 one at a time, stopping at the first failure.

Storix | GitHub | Live | *FastAPI, Celery, Redis, PostgreSQL, WebSockets*

- **Live Job Progress:** Shipped an async PDF ingestion pipeline where Celery workers extract off the request path and Redis pub/sub relays each stage to the client over WebSockets, so users see real progress instead of a spinner.

Hireflow | GitHub | *TypeScript, Node.js, BullMQ, PostgreSQL, Playwright*

- **Isolated Pipeline Stages:** Split ingestion from **4 sources**, AI processing, and Playwright automation onto separate BullMQ queues so a block in one stage never stalls the others; used for real applications.

Skills

Languages: TypeScript, Python, SQL, C++
Backend & Jobs: Node.js, Express.js, BullMQ, Celery, FastAPI, REST APIs, WebSockets
Data & Infrastructure: PostgreSQL, Redis, MongoDB, Docker, Kubernetes, AWS (EC2, S3), Cloudflare R2
AI: LLM pipelines, OpenAI Realtime, RAG, LLM evaluation
Frontend & Tooling: React, Next.js, Git, Linux, CI pipelines

Education

Indian Institute of Information Technology Nagpur **Nov 2022 – May 2026**
B.Tech in Computer Science and Engineering *Nagpur, Maharashtra*

Achievements

- **Competitive Programming: Top 5% globally** on LeetCode (**1800+ rating**, 800+ problems solved) · **3-star** on CodeChef (1700+) · Pupil on Codeforces.
- **Hackathon: 3rd place** at Tantrafiesta 2024, IIIT Nagpur.
