Experience

poiro.com **Jul 2026 – Present**
Fullstack Developer Intern *Python, FastAPI, Celery, Redis, MongoDB, Docker, Turborepo, CI/CD*

- **CI Enforcement:** Cleared **1,041** Ruff findings across **7** Python packages, made whole-tree lint and format checks blocking in **CI** and pre-push, and replaced a hand-kept package list with automatic discovery from pyproject.toml, so **4** packages were checked for the first time.
- **Dependency and Build Upgrade:** Moved the Python baseline and CI matrix to **3.13**, refreshed **70** dependencies across **12** lock files, and replaced **28** hand-written Docker COPY lines with turbo prune across **3** images; flagged provider API keys found committed in old configs for rotation.
- **Provider Adapter Layer:** Integrated Pixabay, Unsplash, and Pinterest behind one adapter contract with org-scoped Redis caching and fail-closed spend caps of **500 calls/org/day** and **5,000/day** globally, to stop runaway provider costs.

klimb.io **Nov 2025 – May 2026**
Full Stack Developer Intern *TypeScript, Express.js, PostgreSQL, Redis, AWS*

- **Usage-Based Billing Ledger:** Designed a PostgreSQL credit ledger that meters each customer's usage of **6+ AI features**, replacing on/off feature flags with an auditable per-feature log that made usage-based pricing possible.

Projects

Yuvro | GitHub | Demo | *Python, FastAPI, Kubernetes, PostgreSQL, AWS S3*

- **Kubernetes Orchestrator:** Built a FastAPI orchestrator that provisions a Kubernetes Deployment, Service, Ingress, and optional database for each project on demand, split into **4** planes so infrastructure actions never leak into user-facing APIs.
- **Storage Garbage Collection:** Stored files once by SHA-256 content hash in S3 and automated cleanup with a scheduled job that deletes files no project references.

CodeSM | GitHub | Live | *Node.js, BullMQ, Redis, PostgreSQL, Docker*

- **Hardened Linux Sandbox:** Engineered a Docker runtime for untrusted code in **6** languages with no network, a read-only root filesystem, all capabilities dropped, and limits of **256 MB** memory, **32** processes, and **0.5** CPU, so fork bombs and infinite loops stay contained.
- **Async Grading Queue:** Offloaded grading to BullMQ workers so the API returns instantly, reusing one container per submission across its test cases with docker exec.

DeepDoc | GitHub | *RAG, Next.js, TypeScript, Azure OpenAI, Pinecone*

- **LLM Eval Harness:** Wrote a **36**-case evaluation suite that separates indexing, retrieval, and generation failures, which caught a bug that was blanking every retrieved chunk.

Technical Skills

Infrastructure: Linux, Docker, Kubernetes, CI/CD, Git, AWS (EC2, S3), Cloudflare R2
Languages: Python, TypeScript, SQL, C++
Backend & Queues: FastAPI, Celery, BullMQ, Kafka, Node.js, REST APIs, WebSockets
Data: PostgreSQL, MongoDB, Redis, Pinecone
AI Engineering: LLM evaluation, RAG, Azure OpenAI, Gemini

Education

Indian Institute of Information Technology Nagpur **Nov 2022 – May 2026**
B.Tech in Computer Science and Engineering *Nagpur, Maharashtra*

Achievements

- **Competitive Programming: Top 5% globally** on LeetCode (**1800+ rating**, 800+ problems solved) · **3-star** on CodeChef (1700+) · Pupil on Codeforces.
- **Hackathon: 3rd place** at Tantrafiesta 2024, IIIT Nagpur's hackathon.
